# 2024

Ultimate iOS compatibility chart Rev:2.0

U/Toasterifclj

[Company name]

1/1/2024

Notes (most important information highlighted)

- **All of this is subject to change at moment's notice I have done my best and have even moved this onto github in order to make updating it easier but companys can break stuff with no notice what so ever one or two apps even died in the making of v2.0**

- I have tried all of these on their last revision so ios 7.1.2 for example (except I used 6.1.3 a couple of times, but it really made no difference except with minion rush, spoiler neither worked)

- if you read revision 1.2 you may be confused why I'm referring to it just as a proxy now. well mulleres-software is a proxy, and you can use that one if you want a public version but you can also set up your own proxy in the form of Charles proxy or other proxy servers and if your confused on what I'm talking about click here

- the info.plist trick is a trick where you go into the info.plist file within a installed app you do this through ifile or filza and you manually change cfbundle (and on some apps cfbundleshortversion as well) and change the version number to either the latest or a different specific version in order to make the app work again and help bypass update nags stopping the application from working.

- I downloaded the latest version when I could, however if one ipa worked on several devices I just used that one.

- I have used checkmate store when downloading all of the apps from the store so if I can't find a version it's not because I don't have checkmate store though if you have any ipa files I may be missing let me know.

- Ios 11 and ios 12 are still too new for me to put it on this list even though it is considered legacy.

- iPhone os 2 or iOS 2 as its dubbed, is a nightmare to use in 2024 it took me 5 hours even to get there (I had to use a touch 1) and when I did I found that the main jailbreak tools didn't work properly on any system that I tried and legacy ios tool kit doesn't support it even then there's no appsync support (you have to use mobile installation a super old fix for fake sign ipas)

- Also, iphoneos 1 has no app support so no real reason to try it I guess I could try these all in the browser but for 90% of them the browser really didn't help much.

- I edited the info.plist to the most recent version when I thought it might help or if there was an update nag or occasionally I used an older version number when I thought it could help. If you have a version number that worked that you think I hadn't tried let me know

- Each app is tested with the capabilities of that version in mind so with reddit on ios 7 for instance you can't get chat messages, but it didn't have the capability too but everything that version could do is still working so it would be listed as fully functional.

- I have marked each square with a color however given so many are colorblind I have also put a symbol so you can still read it key is at the bottom of the chart

- I also did not count having to sideload the most recent version as extra work but I did list when you needed to do it.

- I do have one confirmed working ipa on ios 2 turns out pandora also works if you can find a v 2.x.x version that is the only one, I tested and not even on a ios 2 device because as I said ios 2 sucks in 2023.

- I'm also not counting yt2009, legacyclash, legacy ai clients, or retrogram at least atm.

- Armv6 iOS 4 is referring ios the ipod touch 2 or the iphone 3g there final version is 4.2.1 iOS 4 was still supported longer than that so on armv7 processors they got 4.3.x this is

- important as armv6 devices have worse compatibility.

- if you want the latest tubefixer url or discord classic ipa or to join retrogram join bag-xmls discord server

- Sometimes services go down check this website to see if any legacy service your using is down or not   credit to requis/skyglow https://status.skyglow.es/status/legacy

YouTube chart

	Changing the plist	Verindi ios	Patched iOS 6 YouTube	Browser	Tube Fixer	Tube repair	Mobile stream viewer (vid.funfiles.win)
Ios 10	17.03.02 (orange)	green	purple	green	grey	green	green
Ios 9	orange	green	purple	green	grey	green	green
Ios 8	orange	purple	purple	green	grey	green	green
Ios 7	red	red	red	green	grey	green	green
Ios 6	Most recent (yellow)	red	yellow	green	green	green	green
Ios 5	red	grey	grey	red	green	green	green
Ios 4	red	grey	grey	red	red	Not yet (red)	green
Ios 3	grey	grey	grey	red	purple	Not yet (red)	green
Ios 2	grey	grey	grey	red	grey	grey	green
Ios 1	grey	grey	grey	red	grey	grey	green

Key

- Grey: not available
- Green: working
- Red: not working at all.
- Yellow: only on certain devices
- Orange uncertain
- Purple partially working

Eponyms (**Ossus GmbH**)	/	/	/	/	/	/	/	/	/

KEY

- Green/: mostly or completely functional (at least for the capabilities of that version)
- Light green*: partially functional some issues
- Yellow-: barley functional major issues (will let you do a couple of things but very unusable)
- Red X: completely nonfunctional or N/A(can't use any features it can still load but you can't do anything)
- Orange ?: uncertain (there may be a way to get It working that others have found out or I have speculated but idk)
- Grey#: I can't find a version that is the latest or will let me download even with checkmate store or sideloading.
- Blue +: needs modifications to get it working like changing the version number or sideloading an older version.

Apps	Notes
Misc ones that were going to be on the list, will never be on the list, or may be on the list eventually.	-**Snapchat** doesn't seem to work on any version I tried. - **Roblox** this one is strange but apparently if you follow this guide you can set up a Roblox sever and connect it too a older client there is also a public client in the works built off novetus -**Skype** it has jailbreak detection, and I have my doubts it would work. -Hulu, I don't have an account -**Mercari** considered this one because it was the only shopping app that let me download legacy versions. But no version seemed to work even with a plist change -**Telegram** I don't use it and I've heard a lot of stuff about it shutting down rn (on older versions that is)? Might come in a later revision. - crackle works sort of on ios 5-10 but its acting weird so I need to take a closer look. Im also getting ssl errors on versions I had that used to work so it might have been killed off -**Patreon** really wanted this to work but even on ios 10 it blocks me so no luck unfortunately update nag that I can semi get past but as soon as I enter my credentials it tells me to update the app - **kik** I never could get it working properly on legacy iOS. I knew a few people who got it working on legacy iOS recently like ios 6 on its last working version but now even they say its no longer working and I get errors with ios 7-9 now as well. - **whatsapp** I know a lot of people want this working on legacy ios I don't use it personally. But I do know there is a user named Alwin lubbers working on a fix
YouTube (tubefixer/tuberepair)	- Tube fixer has only ever really worked well for me on 5-6 YOU NEED THE IRSG ROOT CERTIFICATE DOWNLOAD FROM HERE a ton of tutorials don't explain it because it used to not be necessary - For Tube repair, use a YouTube 1.1.0 ipa - If you need help with tube repair go here credit to bag.xml (DO NOT USE THE LISTED URL IN THE TUTORIAL INSTEAD USE THE

	ONES MENTIONED IN BAG XMLS DISCORD) - Ios 3 tubefixer tutorial by me - I do not recommend using ios 3 tubefixer as I found out it only loads vids that have 240p or lower quality (use mobile streamviewer instead) - If tube repair is not working for you may want to try a different url - If you want to check which urls work join the discord because they change frequently - https://discord.mali357.gay/ - Savefades instance allows for both the classic preinstalled youtube app and the 1.x.x revisions of YouTube to work. -
Youtube (mobile stream viewer)	- Thanks to clygro we found the source code if you want to check it out or attempt to run your own instance, I will have it right here - Recommended for ios 1-4.3 and maybe 5.0.x as well - I recommend that you run your own instance of mobile stream viewer because public instances have been unreliable. You can try vid.funfiles.win but its not up now.
Youtube (Verindi ios/patched ios 6 youtube)	- I don't recommend patched ios 6 youtube this was something that I made following a video tutorial a while back its outdated now. but it didn't work super well to begin with its basically a worse version of verindi ios its ONLY benefit is that it somewhat works on ios 6. - Click here to learn about verindi ios
Youtube (browser)	- 3-5 will load the site but no videos will load I think it has something to do with http vs https.
Facebook	- Messages and notifications don't work ios 6. - Use version 5.0 to get ios 5 and ios 4.3 working available my ipa collection check bag xmls discord
Twitter	- Twitter has had a long history on legacy ios with many ways to get it working but earlier this year it finally died on ios 8 and lower. There may still be a way to get it eventually but given how expensive api usage has been

	for twitter it may be never. - For iOS 9-10 you can either change the plist or shut off wifi get to the login screen and turn wifi back on.
Reddit/alien blue	- Ios 3-4 need alien blue plus connection to muellers software.org http proxy explanation. - For Ios 6 you need alien blue you may need the ssl patched version for six - Ios 7-8 don't have messages but never did so no need to mention it. - Ios 9 won't let you log in, fix - Ios 10 messages won't function.
Spotify	- Ios 3-5 no solution - Ios 6-7 new client called fox music gives you an option for Spotify. it's not perfect but more info look at the reddit post about it - Ios 8-9 some stuff doesn't work properly its slighty broken some stuff just doesn't load right on these old clients. - Ios 10 will not let you log in download the ios 8 client and sideload that.
Instagram	- Ios 3-4 clients will not let you log in. - Ios 5 clients The log in screen will progress but then the app will crash. - Ios 6 clients allow log in, but no posts will load following does not work either, I also think you need a account with no email linked too it . - Ios 7-8 clients have no posting, no messaging. - Ios 9-10 clients have no reels you can load vids but not reels in particular. There is a custom server revival called retrogram made by savefade but it does Stream from Instagram's servers its own server with its own posts.
Netflix	Shout out to r/legacyjailbreak for helping with this. - Ios 3-4 won't even load in fact for 3 It has been like this since 2014, outdated 8 bit guy vid - Ios 5-7 tell me that I can't log in or my password is incorrect.

	- Ios 8 I know people who have it but it can't be cracked for some reason bracc0 has it but clutch does not crack it By the way I would like to personally thank Netflix for not having a version that apparently works /s. I would also like to thank the guy on the internet archive who uploaded an encrypted version of the Netflix app for iOS 8 which I can apparently bypass with the iOS 6 bug /s. I've heard that if you use a kodi support file u may be able to get it to work on ios.
Discord	- Ios 3-4 I was wrong they now do have a solution if you use discross you can get them working now you have to have the discross bot within each channel here are some tutorials on how to use discross also mjd vid. You can also if you desire set up a IIRC to discord bridge that would allow you to use something like colloquy in order to use it on ios 3-4. im not 100% sure how one would go about doing this so I cant help you here but I know I couple people who have had success with this(might even work for other chatting services as well like fb messenger) . - Ios 5-9 work HOWEVER you need to use a SPECIFC discord classic ipa the one In the invoxiplaygames.uk repo is outdated check bag-xml's discord server for the latest fix - For ios 7-9 you can also use disc old form invoxiplaygames repo I know it works on 9 but that's the only one I have tested - Ios 10 discord works with no modification. Discord old tutorial and how to get your token
Shazam	- Only 9-10 work and are also the only ones that will download. - I tried changing the plist but that was ineffective I did sideload every version.
Messenger	I don't think ios 3-4 have a version of messenger - I can't get it working on ios 5. - I've tried the ssl patched version for 6 doesn't working tried changing the version number for 6 as well didn't work so I'm not sure if I'm doing something wrong or if its dead and I didn't know about it I also tried the latest version and that didn't work

	either - also you need to change the info.plist version to the latest version on the ios 7, 8 and 9.
Minecraft pocket edition	- Ios 3 there was never a version that supported iOS 3. - Ios 8 the version I downloaded crashed instantly so sideload and older version. Every other version let you play offline, but I don't think you can connect to any servers I'm not 100% sure of this because I don't really play on any servers.
Dropbox	- Ios 3-4 would not let me log in, but I was told and have even seen people on iOS 4 be able to use it - Ios 5-10 works but I occasionally had issues signing in (try making ones without Gmail auto sign in thing) **Addendum*** its days may be numbered as I have been having an increasingly hard time logging in. if I'm already in though I have no issues with it.
IHeart radio	- I can get ios 3 to load but no stations show up. - Ios 4 will load stations but sign in doesn't work every station I try will play 2 seconds of auto then crash. - Ios 5-10 works flawlessly **Keep in mind though it only works in these countries** United States, Canada, Mexico, Australia or New Zealand
Subway surfers	- no version of subway surfers ever existed for ios 3 - ios 10 has a stupid update nag that is impossible to get past so just sideload an older version. - 4-5 don't have versions in the app store anymore (even with checkmate store) - For ios 4 it only works on 4.3.x as there is no version that has ever existed for 4.2.x - I also know for 4 and 5 im pretty sure daily challenge is dead. - And I'm pretty sure something will not work in every version. like a timed exclusive or something like that. - Not sure about game center sync but I do not want to mess with it as I have spent over 70+ dollars USD on characters back in

	the day and I don't want anything to mess with my save of the game. - Most things still work offline though
Pandora	- Amazingly everything still works on every ios version, I noticed a bit of stuttering in ios 3-4 but that's more because of my wifi connection then actual issues. - Even the ios 2 ipa works after all these years albeit slow as frick and It has to be a version v.2.x.x ipa. ***Addendum**: So, as I have recently found out pandora is only supported in the usa so if you're in another country it won't work. You may be able to use a vpn but other then that your screwed sorry about that.
Sound hound	- Use proxy for the oldest versions
Big oven	- Use proxy for ios 3-4.3 clients
Minion rush	- I went on a whole quest with this one ok so - Due to minion rush requiring an internet connection on first startup - 5-6 won't work. - The latest version on Ios 7.1.2 and yes it needs to be that specific ios version works if you change the info.plist to the latest version. - You must sideload that version onto ios 9-10 because I've gotten those clients to load but after the tutorial its stopped working. - I can't decrypt that version because it doesn't do it in clutch. - Ios 8.3 does work but it broke on me once and I had to reinstall it. You still need to do the info.plist trick however.
Foursquare	- [Refer to my guide for 5-9](#)
Smule magic piano	- 7.x.x versions can be fixed with changing the info.plist to the latest version - 4-5 and I think 3 as well will let you get past The tutorial, but nothing will work after that
Wikipedia clients	- 3-6 will work with mullers software.org http proxy (explanation) - 7-8 don't work in any way even with a version change or just using Wikipedia

	though browser and the mullers software.org http proxy doesn't work on these versions. - 9-10 just use the browser
Urban dictionary	- No version for ios 3, V1.0 only supports ios 4.3. - Ios 4 version I have crashes instantly upon boot. - Just use the browser for 3-4
Google earth	- For iOS 5- 8 download a version of google earth - then download this repo (https://cydia.skyglow.es/) and install earth X credit to u/MeMeYuGi and requis for having the repo and u/Maupro12321 for making it - If you know a better way or versions that are delisted but still work for 7-8 let me know - Tweek doesn't work on iOS 3-4
Waze	- The ui will load on 3 however there is no map data. (this might have been b4 google purchased them) - The ui wont even load on ios 4 - On ios 5 you need to change the version number to 3.9.6
Tubi	- ios 7 has a version but it doesn't work - ios 8 has a version but im not sure why its not working.
Pluto tv	- Ios 3-6 existence unconfirmed but even if they did exist, I doubt they would work - The Ios 7 client just loads forever - The ios 8 client gets close it loads the actual video forever - Ios 9-10 work but the clients can be hard to find
Jetpack joyride	- Just like with subway surfers I guarantee you if there was an limited event going on in the version you have it won't work. - Some versions will connect online, some won't. you can tell by the top bit that says S.A.M is online or not. - Sorry this one is so vague I didn't have a ton of versions to work with here I mainly kept reusing the same 4.3 ipa from iOSobscura because I couldn't find version specific

	versions for iOS 5-6, and I can't download it from the Appstore.
	- The iOS 7 version crashes instantly, get an older version.
	- The iOS 8 version has an update nag that is like the most resilient of update nags like holy shit I can't get rid of it no matter what I do.
	- The iOS 9 version is very laggy I don't know If it's because I was using a 4s or if that version is actually laggy.
	- THANKS, HALFBRICK VERY COOL /s
Google maps	- The 3-5 built in apple maps still work after all these years very impressive google :D
	- I did have to sideload an old version for 6.1.3 in particular but the side loaded version still works great 😊
	- The downloaded one works fine for 6.1.6
Default stocks/ weather app	- No way to get it working on ios 3 to my knowledge.
	- It feels like it should work on ios 4 not sure why I tried several things
	- Use https://1pwn.ixmoe.com/dev from u/electimon to fix 5-7
	- You can also get stuff from https://cydia.skyglow.es/
Tumblr	- The app store not let me download any version for ios 7 or below. (even with checkmate store
	- Can't find a version specific to ios 6 not sure if it exists. I know there is one for 5 but that one doesn't work.
	- I can sort of get it working on ios 7 if I change the version number to the most recent posts stuff will load but when I click on a post nothing properly loads
Deezer	- Deezer requires both the proxy and the version number to be changed for every single version except for ios 10
	- Ios 7-8 I had some difficulty with but I used an older version and I got it working that way.
	- Ios 9 refused to work both the base app and the older version nothing it didn't let me get past the login or it just loaded for ever I have 0 idea why but im just stuck if anyone

	else has it working let me know. ***Addendum** the login has not been working on ios 3-5 clients for me I'm not sure if its broken for good or not.
TuneIn radio	- This is another one where it may not be available depending on your region - Ios 3-4.3 have no trouble connecting it also doesn't have a ton of the features that breaks the newer versions its so weird - Ios 5-8 you have to connect to a proxy and for ios 7-8 there latest versions do not work you need to use the older ios 6 version and then connect to a proxy again - 9-10 work flawlessly
Google translate	- Does not work on ios 3-6 doesn't even work in the browser believe me I tried - There is a fix on the way for ios 6 someone did pull it off but I have no idea how they did it and it only works one word at a time so no phrases - Ios 7-10 works
Puffin web browser	- 6 at least used to work not even that long ago but it seems dead now and so does anything beyond ios 8
Mega	- There is no ios 3-5 versions of mega - The ios 6-8 clients are dead they recently killed them off too - Ios 9-10 clients still work
Todo Appigo	- Todoodle synchronization works with every version except ios 9 and 10. - Ios 3-10 not all of the synchronization options work drop box doesn't work on ios 3-7 and icloud is blocked on all of them (I didn't test all of them btw drop box just 404ed on the login screen).
Wikihow	- The app just crashes on ios 3 but the website still works if you use a proxy. - The featured tab does not work on any ios 4.2-8 clients. - You need a proxy for ios 4.2-8 clients - For ios 8-7 you need to sideload an older version.
Weather pro	- Works 100% perfectly on everything I tested.
Cut the rope	- The latest version on ios 3-4.2 only goes up to dj box.

	- Latest version on ios 4.3 only goes up to the cheese box. - Latest version I found on ios 5 (that works) only goes up to pillow - For all versions mentioned except 10 you must pay for season 3 I'm not sure if you can still do that or not but there are ways to bypass app purchases. - Ios 7-9 the app store version crashes on boot so sideload an older version. - Also, the ios 6 app store version is the free version from back in the day.
Abc news	- The ios 5 version is either lost or never existed. - Ios 6-10 versions work with no issue.
Flickr	- You cannot log in on any version other then the ios 9-10 versions. - You need to use a proxy for ios 4.2-5. - You need to use an older client for ios 7-8 as there is mandatory login and login no longer works for those versions.
Eponyms (**Ossus GmbH**)	- Make sure you are using the paid version
